

# APCO SPLITS IN TWO

The manufacturer announced it. The new paramotor harness is now on sale with high points as well as low points. It won't even weigh 1.5 kg and is distinctive thanks to the separation of the two thigh straps (reminiscent of harnesses of yesteryear or the most recent ultra light ones for paragliding hike and fly).

This concept brings, according to Apco, increased comfort, easier take off and landings, as well as better handling.
